

We are pleased to share the latest Optical Express Gender Pay Gap Report. While we fully appreciate that a gender pay gap exists in certain industries across the UK, we do not believe that one exists within the ophthalmic industry. Within Optical Express specifically, gender is definitely not a factor when considering a colleague's rate of pay. Where we have a male and female carrying out exactly the same role, their rate of pay is exactly the same. There are of course, locational, experience and qualification variances. However, whenever these are identical or very similar, the rate pay is identical and no gender pay gap exists.

Optical Express employs approximately 1,040 colleagues and we are committed to achieving equity and parity. Our colleagues represent a diverse culture across the UK, and we are proud that our business reflects that.

To build on the diversity of our colleagues, we provide opportunities via apprenticeships and graduate training within our IT and Finance departments. This also supports our future talent pipeline as we continue to grow.

Optical Express wishes to support every colleague in achieving the work-life balance they seek and we strive to offer flexible working options to all our colleagues, wherever possible. We are keen to support flexibility as much as possible, whether that is for health reasons, family commitments, religious beliefs etc.

We have submitted these results based on a snapshot of our pay data as of 05 April 2025. Optical Express is required by law to carry out Gender Pay Reporting under the Equality Act 2010 (Gender Pay Gap Information) Regulations 2017. This report documents the statistical analysis of the gender pay gap in Optical Express and is based on calculations that show the difference between the average earnings of men and women in our organisation; it will not involve publishing individual colleagues' data. We have established this statistical overview by using our existing HR and Payroll records.

The mix of roles at Optical Express significantly influences the report's results and a serious bias. We recognise that within the many different areas of our business there is a strong variance in gender representation in certain roles. For example, the highest paid colleagues are the company's ophthalmic surgeons, and in the UK, the pool of ophthalmic surgeons with the required skillset is overwhelmingly made up of males. This is due to the gender imbalance within the field as a whole and is not specific to Optical Express. However, we are pleased that despite this gender imbalance within the field, we continue to increase our number of female surgeons and will continue to focus on increasing this number, where possible, through our recruitment strategy. However, all recruitment decisions are firmly based on having the appropriate qualifications, experience and track record, never in relation to gender.

Meanwhile, the colleagues in our Theatre Practitioner roles are predominantly female. The variance of the types of roles, and those who occupy those roles across our organisation, significantly affect how the government's calculations are reported.

The below statistical information is confirmed as accurate by Manvir Aujla, HR Manager, March 2026. Pay data is based on UK colleagues from the 'pay period' including 05 April 2025, in line with Gender Pay Reporting under the Equality Act 2010 (Gender Pay Gap Information) Regulations 2017.
